COVID-19 Campus Repopulating Work Group
Minutes
August 10, 2021

Present: Kerri Kane, Chester DeGray, Keith Paul, John Reynolds, Jonathan Miller, KC Senie, Deb Avery, Gladys Franco, Darlene O’Brien, Amy Belina, Lara Sharp, Darcey Kemp, Louisa Davis-Freeman and Chief Rivera

Discussion Points

- Facilities has finished an inventory of the areas that will require hand sanitizers and surface wipes. Placed order for additional hand sanitizers and surface wipes as well.

- Air purifiers will be distributed to necessary areas in the near future.

- Deb Avery will reach out to R. Greco. Can the three classes now scheduled in Bldg. 13 be moved to another building? If so, Bldg. 13 can be closed and will not need a maintainer. Still down two maintainers.

- Louisa Davis-Freeman – moving along. Traffic in her area light today. She will get the keyboard cover order to Liz in the near future.

- Amy Belina – light traffic in her area as well. Ten to twelve students per day. Students are coming in fully masked and there have been no issues. Two to three staff members onsite daily.

- Chief – business as usual

- Deb Avery – hoping to set up a temporary RAM card station in the B19 Café area. Will follow up with more information.

- KC Senie requested that furniture be moved to make room for social distancing. Deb Avery will do so (if possible) on a case by case basis.

- Deb Avery – Facilities will remove furniture from the student hang out area between Bldg. 15 and Bldg. 16 to discourage anyone from using that area.

- Jonathan Miller would like to hold fire extinguisher training next week if possible. KC Senie will review email and get back to Jonathan.

- Dr. Butler is currently in the process of redoing the 2020 Repopulation Plan to the 2021 Repopulation Plan. A draft copy will be shared with this group before distribution. The website is also in the process of being updated. Used Bristol Community College and the College of Saint Rose as examples.

- By the end of August, the Campus Repopulation Workgroup will be transitioning to a COVID Response Team as part of the Emergency Management Team. At that point it will become part of our Comprehensive Emergency Management Plan.
